Instructions for Photoshop Files

After downloading the „.zip" file, start by extracting it. Next, open the file with the „.psd" extension.

Once you have opened the Photoshop file, you will find the „Layers" section at the bottom right. By toggling the visibility of different layers, you can customize the bike according to your preferences.

1. Changing the bike's color

First, go to the „Body Colour" layer. Below it, you will see the „Color Overlay" effect. Double-click on „Color Overlay" (see Figure 1).
This will open the Layer Style window. Please click on the color swatch, choose your desired color, and confirm with „OK" (see Figure 2).

2. Changing the decore workspace

On the „Beverage" layer (depending on which bike you are customizing), you will find the folder „HPL Decore." Open this folder and select the desired decoration by activating the layers with the „eye symbol" (see Figure 3).

3. Adding a logo

Open the folder on the „Branding" layer. Inside this folder, you will find two layers: „Front Side" and „Client Side." Double-click on one of the layers (see Figure 4). This will open a new Photoshop window where you can place your custom logo (see Figure 5).

Important: After placing the logo, save the file (File - Save) and close the Photoshop window with the logo.
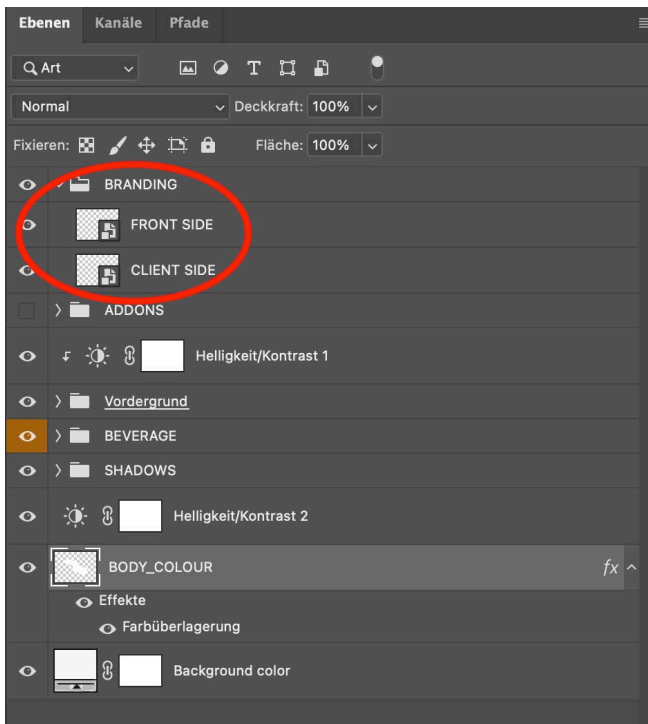

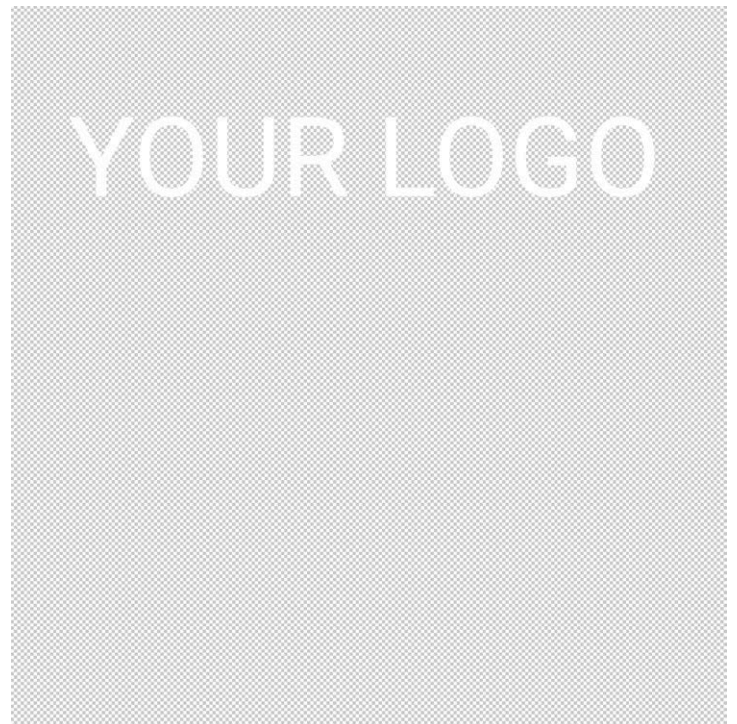

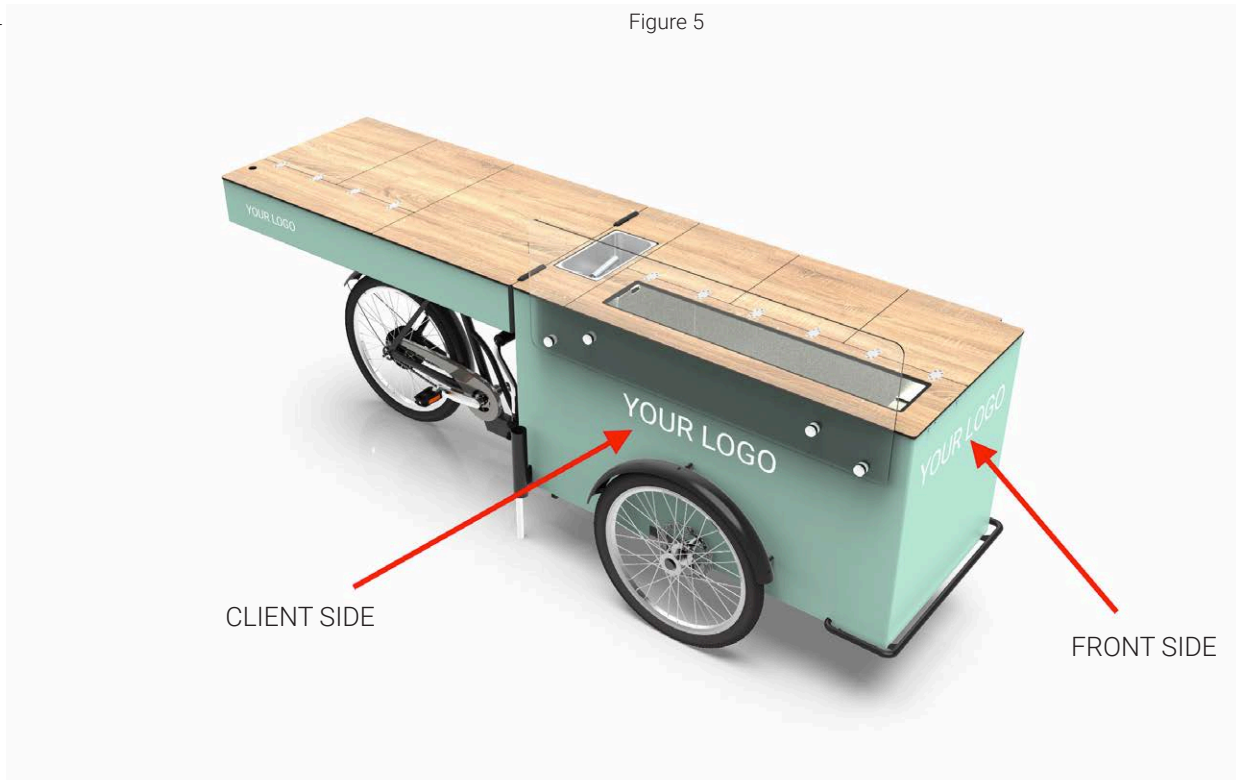

Repeat the process with the second layer.

4. Addons:

Under the „ADDONS" folder, you have the option to add additional features such as a rattan basket or an iPad (see Figure 6).
